Office Action Summary	Application No. 10/688,985	Applicant(s) TREPANIER, PAUL	
	Examiner Stephen Avila	Art Unit 3617	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 3617

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made:

2. Claims 1-10, 12, 13, and 17-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davis et al in view of Leverton (cited by Applicant). Davis et al disclose the basic claimed structure including a pontoon 12 with a plurality of generally elongated shell segments 20, 22, 24 including a sliding male to female connector (note Figures 5 and 6, for example). The pontoon of Davis et al is rotationally molded (column 1, lines 34-40) and includes a base with a channel (note the bottom of the pontoon, Figure 8) and a supporting element with a flange 40. Not disclosed by Davis et al is a filling component slidably insertable through an end with end cap. Leverton teaches a filling component 60 slidably inserted through the end of a pontoon shell 51 with an end cap 54. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to form the device of Davis et al with an slidably insertable filling component with end caps to maintain the buoyancy of shell while providing rigidity and strength.
3. Claims 11 and 14-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lundholm shows a pontoon.
